Stage main screen

Once screen

Fixed advertising screen

Stage side screen

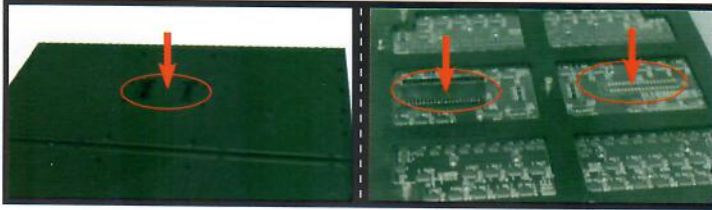

Fixed sky screen

# Five Advantages, Nine Characteristics, Five Application Areas

## Five Advantages

### 1). Not divided into left and right modules, greatly reducing inventory cost for customers.

With only 500X250mm module size, power and signal enter in the middle of modules.

▲ Linking pin headers on modules and HUB board are located in the center, free from separating left from right modules.

▲ One Pin header on the left module, another on the right, thus inevitable for left and right modules differentiation.

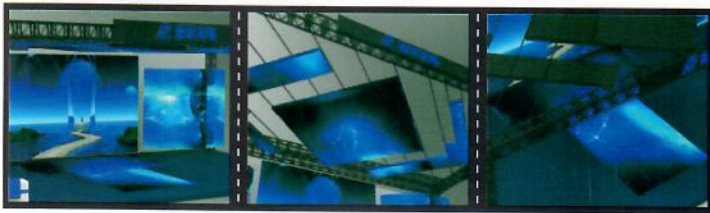

### 2). The clearest stage design LED screen

The first stage design LED screen accessible for arc splicing with pixel pitch less than 6mm

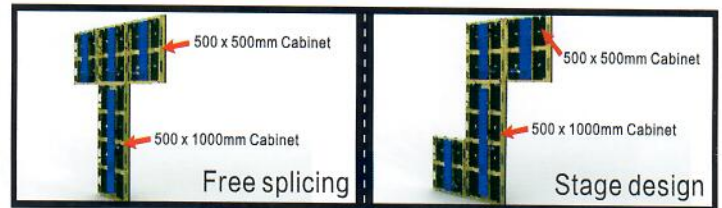

### 3). Various application and high cost-effectiveness

Available for various stage design applications such as dance floor, sky screen, indoor fixed screen, rental screen, irregular shape screen.

### 4). Flexible stage design

500mm cabinet is pieced together easily with 1000mm cabinet, helpful for stage design.

### 5). Light and slim, saving costs and time

Cabinet thickness and weight are less than 60mm, and 10KG respectively, and weight per square meter not even 20KG, which is pioneering in the industry.

## Why we choose Tamam LED screen?

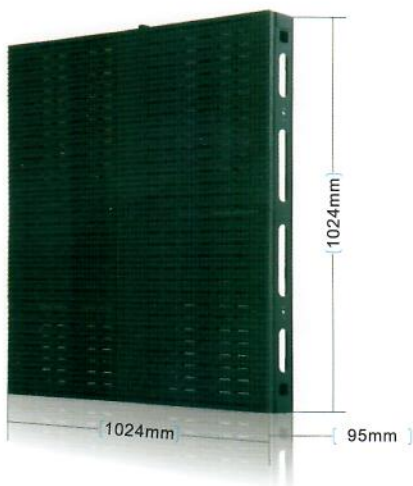

## Nine Characteristics

- ▲ Viewing angle 140 degree
- ▲ Adjustable curved angle plus&minus 15 degree, very suitable for stage design
- ▲ IP54, can be semi-outdoor
- ▲ Fan-free design, more eco-friendly
- ▲ Cabinet extra frame design for safety and stability
- ▲ Power supply and module separately to avoid color cast
- ▲ All the cable connection in a tidy way, looks very neat
- ▲ Power supply attached on the back cover, easier for maintenance
- ▲ Back cover with fast lock design makes the maintenance faster and easier.
